

Harley Street Annual GP Symposium September 2018

This year's symposium themed "Cardiovascular Risk Management Redefined – What else should we be doing for our patients?" was held on 15 September 2018 at The Regent Hotel.

The annual symposium is a great learning platform for our specialists to engage GPs and share latest updates and management of patients in the field of cardiovascular diseases. Co-management of patients together with GPs has always been our priority and we believe that GPs play a pivotal role in chronic care and therefore good communication between our specialists and GPs in the community will ensure a seamless care for our common patients.

Cholesterol management is an integral part of a GP practice. Dr Rohit Khurana's topic provided insights to new updates in lipid guidelines and lowering cholesterol to new depths with new cholesterol lowering agents such as PCSK9 inhibitors. Dr Peter Ting's talk addressed new and traditional measures which aim to reduce risk in heart failure patients. Our vascular surgeon, Dr Sriram Narayanan provided an overview of the interventional & best medical therapies for carotid and peripheral vascular diseases.

The event was a great success with more than 100 GPs attending the session. We would like to thank all GPs for the attendance and support and the generosity of our industry sponsors.
